Message from the Course Director and Director of IICPSR, Al Azhar University

Infertility contributes to the global burden of diseases and affects quality of life. The treatment and prevention of infertility of the 186 million infertile couples in the developing world, except China, is a reproductive right in line with the agenda of Cairo ICPD 1994.

In developing countries infertility is a medical and social problem with gender sufferings. Infertility prevention and treatment is a political commitment as it involves nondiscrimination against women, contributes to the success of Family Planning program, prevention of STDs, protects resources and contributes to development and achievement of MDGs.

The objectives of this workshop is to update participants on the prevention of infertility, cost-effective evidence based method of diagnosis and treatment of infertility and the provision of ART services in low recourse countries.

The practical part of the workshop provides directions and assistance to the participants to provide complete infertility service, including ART, integrated in reproductive and sexual health services in their own hospitals or countries.

The collaborative efforts of FIGO Committee for RM, ICMART and Lubeck University in conducting this workshop are well acknowledged.
